

Dedicated Internet Service

Dedicated Internet Access offers a high-speed solution for businesses that need high-performance and full-time dedicated Internet access. DIA provides you with cost effective high speed Internet connectivity that matches your business needs and gives you the power to get business done fast and efficiently. It provides you with the ability to transfer large amounts of data instantaneously across the Internet.

On-Site Consultation

We come to your location to assess your needs and requirements so that you get the best possible service.

Data & Voice Service

Integrated Voice and data provides a simple solution that combines both voice and data over the same circuit. Additional features are integrated into the product to assist in running your business more efficiently. Competitively priced, IVAD allows you to transition from standard telephone service to Voice over Internet Protocol (VoIP) without the need to replace your current telephony equipment. IVAD dynamically allocates voice bandwidth on demand, so you have the opportunity to build a solid, stable communications foundation that will grow with your expanding business needs and provide the competitive edge to succeed in the marketplace.

Dual-Homed DATA / Internet

Need to be reliable and have as much up time as possible we can help. With our unique solutions we can provide you with dual-homed internet to minimize any downtime (on two different providers), load balancing to share the bandwidth and full monitoring.

Fiber Internet: Flexible, reliable connectivity for today's business needs.

This Ethernet-based service provides symmetrical access speeds of 2Mbps to 1Gbps, scalable in increments as little as 1 Mbps, for equally fast uploads and downloads. It easily interfaces with your local area network (LAN).

Data Networking: Many locations – one network.

Charter Business® & Telenet worldwide offers a redundant, reliable data network that can connect multiple locations to help your business run smoothly and efficiently.

Voice Trunk: High-capacity phone service for high-volume applications.

Designed to support call centers, large businesses with high call volume and companies with many employees, Charter Business® Voice Trunk is scalable to handle the most demanding inbound and outbound needs.
