

Security Camera Systems

Scalable solutions from outdoor to indoor and both on the same system and all monitored from a single location or multiple locations. Some of our systems even have the ability to be monitored from a cell phone.

On-Site Consultation

We come to your location to assess your needs and requirements so that you get the best possible service.

Outdoor Cameras

Our industry partners such as Sony and GeoVision have combined a unique package to offer some of the best in class camera systems and solutions. Our outdoor cameras are designed for Michigan weather and operate year round in the elements. You can even add features such as complete night vision to each of the cameras. Like the NightGuard - The NIGHT GUARD Infrared Sony Super HAD Cameras are exceptional for clear daytime, and EXCEPTIONAL Night Time Vision with up to 164 FEET in Complete Darkness. The NIGHT GUARD CSP-310 camera is both ceiling and wall mountable. Works excellent in low or poor lighting conditions for high resolution images in complete darkness (0 Lux). The NIGHT GUARD camera is commonly used outdoor for business including hospitals, warehouses, schools, etc. The all WHITE Color makes them very attractive option for a variety of installations. This Camera produces an EXCEPTIONAL high color resolution picture during the day - and at night, the built in CDS sensor automatically switches the camera from color to black and white with infrared mode, allowing you to see in darkness.

Indoor Cameras

The indoor camera solutions offer every type of camera you can imagine from visible cameras, to hidden cameras, wireless to wired and more. Great features such as high resolution and image motion detection can be enabled.

Monitoring and Recording Software

The GeoVision PC DVR has all the latest features and functionalities you would hope for in any digital video recorder. With the use of the GeoVision PC DVR you can perform simple functions such as **remote live internet viewing, sophisticated motion detection, object masking, and more.** Video conveniently stores on your PC hard drive, making it simple and easy for you to burn video to a **CD, DVD, or Flash Drive.** You can also email video to other PC's.

Our PRO SERIES, EXTREME SERIES, and ENTERPRISE SERIES Digital Video Recorders come furnished with all software built-in. Internet and Cell Phone Viewing Software is included. Our Multi-Location Monitoring(CMS) Software allows you to manage up to 8 Different Locations from One Internet IP Address. The Network Software, conveniently allows you to also access your cameras on any local PC at the DVR Location. You may also set up user privileges. You may create an individual user ID and Password for up to 15 users. For example, you may want a manager to see live video, but not have access to the function or reviewing previously recorded video.

The Motion Detection Software allows you to set cameras to motion recording mode instead of 24/7 recording, enabling to save more space on your hard drive. It also saves files in a "series of events", making reviewing video fast, easy, and effective.

Address each camera with its own name. For example, Camera #1 can be called "DOORWAY ENTRANCE". Each individual is time and date stamped and video is digitally watermarked to prevent video evidence tampering.

As you see from the Software above, you have Multiple Display Screen Options. View your camera one at a time, or view multiple cameras on one screen. Notice the four different layouts above. You may also use the "switcher" mode allowing each camera to be displayed one at a time in a sequential fashion. You may also control the brightness, color, saturation, and hue of each camera for the best and clearest view. Each cameras functions can be customized individually.

On the far left side, notice the Pan Tilt Zoom Camera Control Virtual Joystick. Control multiple PTZ Cameras from the Software included. You may go up, down, left, right, zoom in and zoom out, and set up tours from the DVR.

The benefits of a quality video surveillance recording system are "priceless." Whether you are fighting theft, vandalism or crime, managing employee production, keeping an eye on your home, or even a child or an elder, Security Camera Systems give you a reliable convenient way to "Monitor Your Most Important Assets."
